Summary

Aspiring Full Stack Developer completing a Software Development Diploma at SAIT (April 2026). Experienced in building secure, scalable, and user-focused applications across mobile, web, and IoT systems. Strong foundation in C#, JavaScript/TypeScript, and modern frameworks including .NET MAUI and React Native. Demonstrated ability to deliver production-style projects using Agile methodologies, with a focus on clean architecture, security, and performance.

Experience

Volunteer Software Developer

Osperity — Calgary, AB

Oct 2025 – Apr 2026

- Developed a cross-platform mobile monitoring application using React Native and Expo.
- Built a map-centric interface integrating Google Maps API with coordinate conversion, site lookup, and navigation features.
- Implemented live camera-view access and integrated external APIs with secure key handling.
- Contributed to a production-style prototype presented at SAIT Capstone Convention after a 3-month Agile cycle.
- Collaborated using GitHub for version control, code reviews, and team workflows.

Freelance IT Support

Calgary, AB

Jan 2023 – Present

- Provided technical support by diagnosing and resolving hardware/software issues for local clients.
- Installed, configured, and optimized systems to improve performance and reliability.
- Delivered efficient solutions that minimized downtime and improved client satisfaction.

Projects

Zero-Plaintext Password Manager

Security + Full Stack | 2026

- Built a privacy-focused credential vault using React (TypeScript) and ASP.NET Core.
- Implemented client-side encryption using PBKDF2 and AES-GCM, ensuring no plaintext data is transmitted or stored.
- Designed backend services for encrypted data persistence and secure session handling.
- Added advanced security UX features including auto-lock, password generation, and clipboard clearing.

Stock Prediction Application

C#, ML.NET | 2026

- Developed a cross-platform stock analysis app using .NET MAUI and ML.NET.
- Engineered financial indicators (MA, RSI, volatility, returns, volume) for predictive modeling.
- Built a modular architecture separating data processing, ML pipeline, and UI.
- Achieved realistic prediction accuracy (~55–60%), demonstrating understanding of market limitations.

SoilSen (EmergEx Final Project)

IoT + Mobile | 2026

- Developed an end-to-end IoT prototype using Raspberry Pi Pico and moisture sensors.
- Designed a reliable single-node system with radio communication to stream data to a mobile interface.
- Focused on engineering trade-offs, system stability, and scalability for future multi-node expansion.
- Presented at SAIT EmergEx as a complete hardware-to-software pipeline.

Custom Portfolio Website (Freelance Client)

Node.js, React, HTML, CSS

- Built a responsive portfolio site to showcase client artwork.
- Implemented a secure contact form with backend email handling.
- Designed a modern UI to improve engagement across devices.

Education

Diploma in Software Development

Southern Alberta Institute of Technology (SAIT), Calgary, AB

Graduation: April 2026

High School Diploma

Centennial High School, Calgary, AB

Graduated: May 2024

Skills

Languages:

C#, Java, Python, JavaScript, TypeScript

Frameworks & Technologies:

.NET MAUI, ASP.NET Core, React, React Native, Expo

Web Development:

HTML, CSS

Databases:

Microsoft SQL Server, MariaDB

Concepts:

Object-Oriented Programming, Secure Application Design, API Integration, Basic Networking, UI/UX Principles

Tools:

Git, GitHub, Visual Studio, HeidiSQL
